Child Security, Parent Convenience, Smarter Schools

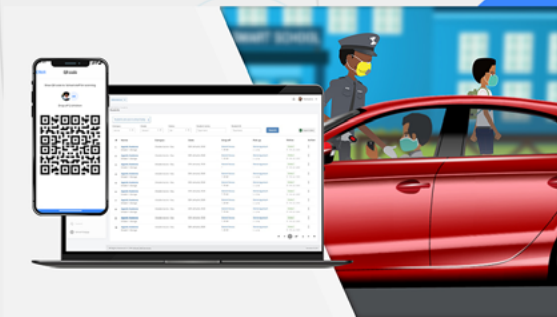

If you could do more to protect your child, wouldn't you?

Your child deserves to feel secure at school and you should have the peace of mind that all aspects of their school day are fully safeguarded. At Penfield, we constantly search for ways to protect the wellbeing of your ward(s) and improve our relationship with parents and we've discovered a simple, innovative way to help us do this – SmartSapp.

SmartSapp (Smart School Application) is a multifaceted application that enhances child security, eases everyday school processes, and simplifies communication between schools and parents. Developed by a parent with a keen desire to make school systems more secure so children can be safer, SmartSapp helps parents reinforce the academic and personal successes of their children by facilitating a safe learning environment.

SmartSapp Features

The Drop-off/Pickup feature does multiple things at once – Arrival and departure of children is electronically scanned and recorded, while verifying the individuals who drop off and pick them up. Upon scanning at arrival, attendance of students is automatically logged, so teachers know to expect them in class.

SmartSapp gives additional security against the spread of COVID-19 in school through a reliable risk checker app. With this app, the risk status of all students is rated using an algorithm and all students who are deemed to be sick or posing a high risk are advised to stay at home.

Additionally, SmartSapp provides a secure and single point for multiple engagements between schools and parents making communication simple and effective

SmartSapp Security

Data transmission between the application and all servers and devices is encrypted and a firewall protects against attacks. A separate specialised technology protects against "Brute Force Attacks" while (HSTS) protects against packet sniffers. Enhanced server security – server hardening – protects against numerous attacks.

SmartSapp is user-friendly, well organized and has numerous other features which can be added on to help you maintain control over your child's wellbeing.

**Take charge of your child's security,
it's so easy to do with SmartSapp**
