Connected Community

The SmartSapp Connected Community Module provides a single point for multiple engagements between schools and parents. The Connected Community module serves as an easy to use platform where teachers can keep parents informed about issues concerning their children's progress in school, amongst other things.

School assignments can be shared with parents of class groups through the Connected Community module, where they can then make comments and receive further explanation where needed. Through this same means, school issues that require the input of parents can readily be shared for discussion, thereby eliminating the need to frequently organise mass or individual meetings which may not always be convenient for everyone concerned.

Every SmartSapp Connected Community platform is manned by staff members who serve as administrators for the various classes, and parents are free to comment on all posts and information shared by administrators.
